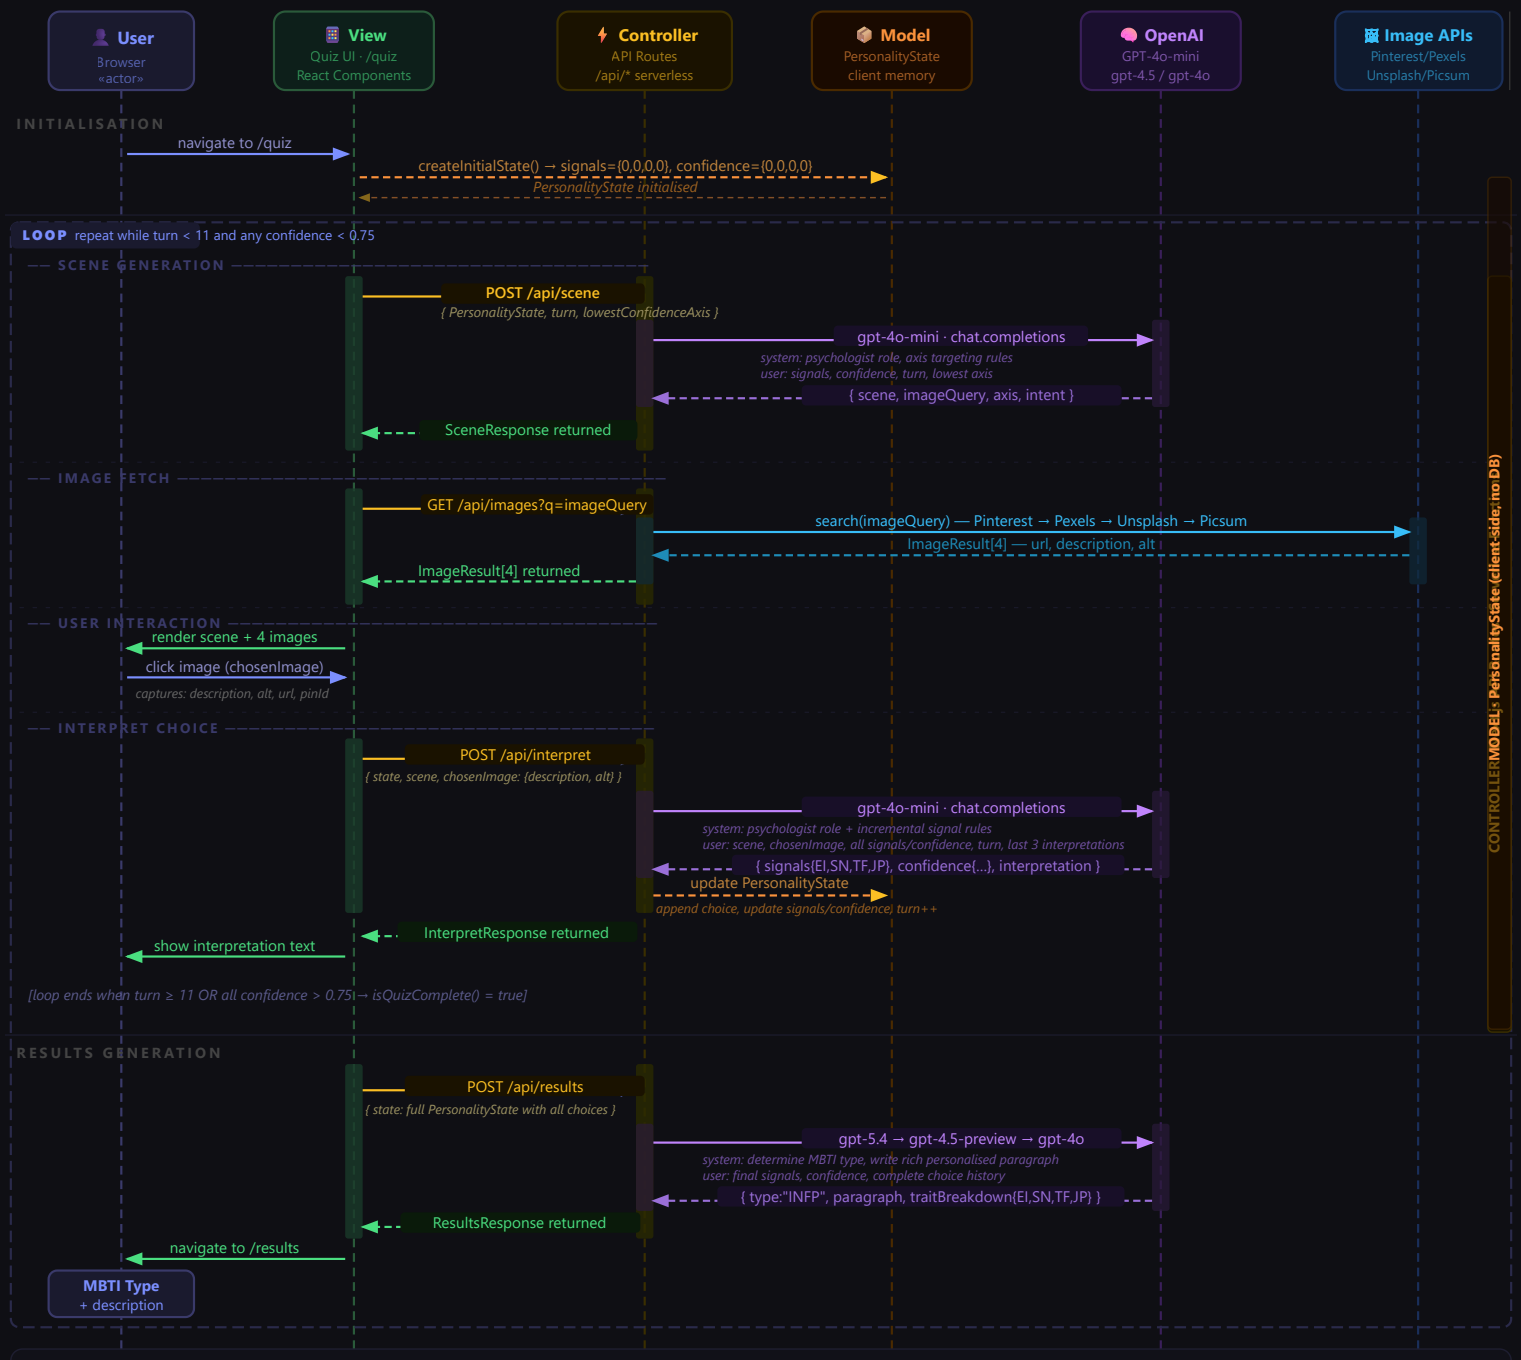
Personality Quiz — Sequence Diagram

Assignment 2 · ID2116 Computing for Design

MVC ARCHITECTURE · NEXT.JS · OPENAI API · IMAGE APIS



LEGEND

→ synchronous request / call

↩ response / return value

activation box (component is active)

Model (PersonalityState) is held in browser memory only — no server-side database. It is passed as JSON in each API request body.

The loop runs up to 11 turns. Early exit when all 4 MBTI axis confidence scores exceed 0.75 (isQuizComplete() = true).

OpenAI model escalation for /api/results: tries gpt-5.4 first, falls back to gpt-4.5-preview, then gpt-4o if earlier models fail.
